

## Data model

We have **four fact tables**: *stock\_data*, *TSR*, *volatility*, and *dividend*.

The **dimension tables** include *calendar* and *company*.

The **sector-related columns** are split into two dimensions: *sector* and *sub-sector*.

Additionally, there is a dimension table that defines the relationship between sector and sub-sector, showing which sub-sector belongs to which sector in *sector\_subsector\_combination*.
